Regulatory Authority:	Registrar of Securities Services
Date of Publication:	January 2018

**Alert: You are about to purchase a product that is not simple and may be difficult to understand**

## Product definition

**Type: Call Options on listed Currency Futures Contracts, quoted as an exchange rate (difference in value of the underlying currencies). The option strike price is also quoted as an exchange rate.**

## Objectives

JSE listed currency call options are listed securities that grant market participants the right, but not the obligation, to buy a listed futures contract which futures contract will give them exposure to the exchange rate between the South African Rand and a foreign currency. Retail investors do not require exchange control permission or an offshore trading account, as the price of the JSE listed currency options is paid in Rand at expiry of the option. If the option holder elects to buy the underlying futures contract, the futures contract is settled in Rand based on the difference between the value of the ZAR and foreign currency at conclusion of the futures contract and the value on the expiry date of this security. Investors therefore never own the physical underlying currency. The JSE listed currency options also do not affect the offshore allowance of individual investors. JSE listed currency options are European style options.

The option price or premium is dependent on various factors including, but not limited to, the price of the underlying asset (the futures contract), the volatility of the underlying asset (currencies) in the futures contract, interest rates and time to expiry. The difference between the futures contract's value at expiry and the futures contract's value when purchasing the futures contract will result in the market participant's profit or loss on the futures contract. The buyer will realise a profit if the value of the underlying currency to the futures contract has increased or a loss if this value has decreased on expiry of the futures contract. Conversely, the seller will realise a profit if the value of the underlying currency has decreased and a loss if it has increased on expiry of the futures contract.

The **buyer of a Call Option on Currency Futures has the expectation of strengthening exchange rates**. Thus the buyer expects that the underlying asset price at expiration will be higher than the sum of the option strike price plus the option premium, in which case the buyer will make a profit.

A **seller of a Call Option on Currency Futures has the expectation of weakening exchange rates**. Thus the seller expects that the underlying asset price will be lower than the sum of the option strike price plus the option premium, in which case the seller will make a profit. The payoff profile at expiration is asymmetric and shown in the “Performance Scenario”

**Intended retail investor**

Currency option is a product suitable for clients with extensive knowledge and/ or experience in derivative financial products. It is not meant specifically for retail investors. A retail investor should become familiar with the product characteristics to make an informed decision on whether or not this product fits their investment needs. A retail investor should contact their broker or investment adviser to obtain investment advice.

**Risks and return**

**Risk indicator**

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

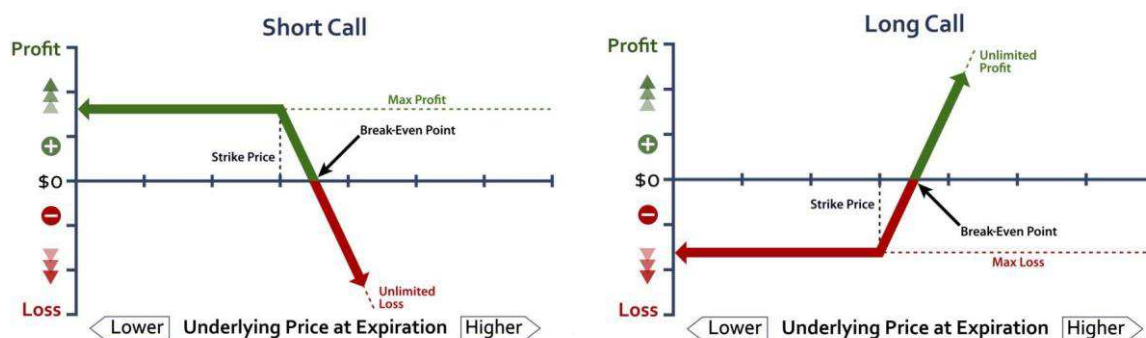

The product can be held for the duration of a short-, medium- or long-term investment horizon.

We have classified these products as 7 out of 7, which is the highest risk class. This rates potential losses from future performance at a very high level. Futures are leveraged products; initial costs of a customer, e.g. execution fees, assets deposited to secure the future’s exposure, account for only a small percentage of the traded contract’s overall value. Small changes in the future’s price can result in huge gains or losses. In some circumstances, you may be required to make payments to pay for losses. The total loss you may incur may be significant.

**Performance Scenarios**

These graphs illustrate how your investment could perform. The horizontal axis shows the range of possible prices of the underlying asset on the expiry date and the vertical axis shows the profit or loss of the contract.

The payoff profile of the option is asymmetrical as shown below.

A **Buyer** enters into a long position on the call option in expectation of **strengthening** exchange rate.

A **Seller** enters into a short position on the call option in expectation of **weakening** exchange rate.

The profit or loss is calculated by taking the closing value of the contract and subtracting the initial value of the contract at initiation of the transaction. If the result is positive, the buyer makes a profit and if it is negative, the seller makes a profit

#### What happens if JSE is unable to pay out?

The JSE is an exchange approved under South African law. Any derivative transaction traded on the JSE is cleared by JSE Clear (Pty) Ltd. Further information can be obtained at <https://www.jse.co.za/services/post-trade-services/clearing-and-settlement/derivatives>

#### What are the costs?

The JSE charges fees to its trading members via their clearing members. The full fee schedule is available on the website at <https://www.jse.co.za/services/technologies/price-list>.

The broker or intermediary with whom the investor has a contractual relationship may also charge other transaction and related costs, and will be able to provide further information with regard to all these costs.

#### How long should I hold it and can I take money out early?

There is no recommended holding period for these products. They can be help for the duration of short-, medium-, long-term investment horizon. The optimal holding period depends upon the retail investor's individual strategy and risk profile. A derivative position can be traded and closed out on any trading day until expiration. In particular, a long position can be closed by entering a sell order in the market on any day up to and including the expiration date of the contract, and a short position can be closed by entering a buy order in the market on any day up to and including the expiration date of the contract.

#### How can I complain?

Retail investors should address complaints to the broker or intermediary with whom the investor has a contractual relationship. Furthermore, the retail investor can address complaints to the JSE at [info@jse.co.za](mailto:info@jse.co.za)
